

TAME YOUR CAT WITH IN-BOOM FURLING

Forespar's Leisure Furl in-boom mainsail furling system is the best way to hoist, furl or douse that heavy, fully battened mainsail. No more strenuous halyard pulling or climbing up to release and clear the lazy jacks. Just hoist the sail and go sailing.

DON'T JUST TAKE OUR WORD

"It's a must for a short handed long distance cruising cat. If you can't reef easily and quickly, you won't! If you can reef and un-reef easily...you will.

I also can un-reef the boat on any point of sail. As such, I don't mind being under canvassed for a bit as it's so easy to shake out the reef without changing course. I'm a big believer and I wouldn't hesitate to have the system again on a boat I was outfitting for long distance cruising on a catamaran. ESPECIALLY, a short handed crew. I have 45,000 miles on this boat and the peace of mind has been more than worth the cost."
